**Fastener application guide for  
Euroclad Elite Roof and Wall Systems**

## PMJ-tec Technical Information

PMJ-tec recommend the use of a screw gun fitted with a depth setting nose cone for accurate and consistent washer compression during installation of fasteners. Do not use percussion or hammer drills.

ETAs - European Technical Assessments - are a cornerstone of our commitment to proven quality and reliability. Available exclusively to European manufacturers, it demonstrates independently assessed standards and differentiates PMJ-tec as a fastener manufacturer from non-manufacturers who supply and distribute generic fasteners.

DIBt - Deutsches Institut für Bautechnik - are the approval body for construction products that controls and issues our ETAs.

The CE mark indicates that a fastener is consistent with the data provided in the relevant Declaration of Performance as issued by PMJ-tec AG.

Information correct at time of going to print. For the purposes of continuous improvement we reserve the right to change product specifications. E. & O. E.

# EUROCLAD

PMJ-tec is a roofing and façade fastener manufacturer specialising in high grade, corrosion resistant stainless steel products. People are at the heart of our 'service and innovation' culture and our commitment to our clients extends to providing reliable product and application expertise gathered from the knowledge gained since our formation in 1975. We also offer on and off-site technical support in the markets we service worldwide.

As a genuine manufacturer based in Switzerland all our products are CE marked, supported by European Technical Assessments (ETAs), which involves regular 3rd party audits of our manufacturing and processes. Our products carry a comprehensive insurance backed warranty and we can provide full CAD and BIM support.
